Stem Cell I-Lash Regenerator

Regenerates new lashes
Increases lash volume

PRODUCT DESCRIPTION

Cosmetic Solutions Stem Cell I-Lash Regenerator has been formulated to not only give the appearance of increased lash volume, but also help regenerate them. The active ingredient Gamay Teinturier Fréaux, Grape Stem Cell stimulates the epidermal stem cells that are at the base of the lash follicles and are the source for continuous regeneration of the epidermis, the formation of new hair and hair pigments. Stem Cell I-Lash Regenerator magnifies and creates a flexible, moisture retentive film on the eyelashes. By increasing flexibility and preventing breakage, eyelash hair can reach its full potential. Studies have shown an improvement in the structure of lashes by stimulating lash stem cells with the grape stem cells.

KEY BENEFITS

- Delays senescence of essential cells
- Conditions eyelashes for a naturally fuller appearance
- Increases volume
- Lashes appear longer and thicker

SCIENCE

A novel technology has enabled the cultivation of a rare grape variety, Gamay Teinturier Fréaux. This cultivar, originating from the Burgundy region in France, is characterized by its red flesh and juice due to the extremely high anthocyanin content. Most red grape varieties have white flesh under their skin but in the case of the Gamay Teinturier Fréaux, anthocyanin pigments are also present in the pulp. Anthocyanins are powerful antioxidants and free radical scavengers. Using a novel Progenitor Cell Targeting technology, Grape Stem Cell Serum was shown to help the skin stem cells to maintain their stem cell characteristics.

DIRECTIONS

Apply to eyelashes with applicator before applying mascara.

INGREDIENTS

Purified Water, Hyaluronic Acid, Glycoproteins, Vitis Vinifera (Grape) Fruit Cell Extract Panthenol (ProVitamin B5), Phenoxyethanol, Ethylhexylglycerin.
